

SiteSmith / OpenCurb Media - Third-Party Platforms

The following is a list of third-party platforms, APIs, and libraries used to build this website:

1. Web3Forms API

Used for accepting and processing contact form submissions securely without needing a custom backend server. Data is routed directly to your email address.

2. Tailwind CSS

A utility-first CSS framework imported via CDN. Used for rapidly styling the user interface, creating responsive layouts, and establishing a consistent design system (colors, typography, spacing).

3. Lenis (Smooth Scrolling)

A lightweight smooth-scrolling library imported via CDN. Used to create fluid, momentum-based scrolling experiences on desktop devices.

4. Google Fonts

Provides typography across the site. Specifically uses Space Grotesk for headings, Inter for body text, and JetBrains Mono for code blocks.

5. Material Symbols (Google)

Used for iconography throughout the site, such as menu icons and feature checkmarks.

6. Three.js (WebGL)

A cross-browser JavaScript library used in the examples/demo pages to create and display animated 3D computer graphics and interactive elements in a web browser.
